READING

Task 1. Read the passage and then answer the questions below.

/6x1=6 points/

Tweenbots

Imagine the busy streets of New York City, an enormous place with millions of people. Every day, the streets are congested with people going about their daily lives. Now imagine a small robot in the middle of all of those people rolling down a busy sidewalk. Most people would not even notice the ten-inch smiling robot, called a Tweenbot, rolling along the street. This strange machine may interest some people, while others would ignore it completely. A researcher interested in studying how helpful people really are uses such robots in her experiments that take place on the streets of New York.

The Tweenbots experiment is the idea and creation of Kacie Kinzer. Kinzer's idea was to make a robot that could navigate the city and reach its destination only if it was aided by pedestrians. Tweenbots rely on the kindness of warm-hearted strangers. Made simply of cardboard, wheels, and a device to turn the wheels, the Tweenbots face many dangers on the city streets. They could be run over by cars or smashed by careless kids. Kinzer thought her little robots might even be seen as some kind of terrorist device. The only real protection a Tweenbot has is its friendly smile. In addition to that, each of Kinzer's robots is fitted with a flag that displays instructions for the robot's destination. The only way these robots will reach their final point is if someone lends them a hand. Tweenbots are essentially a social experiment aimed at providing people a chance to show how caring they are.

On a daily basis, people in New York City are often in a hurry to get around. However, the Tweenbots, through their inability to look after themselves, took people out of their normal routines. The people who noticed the helpless little robots were actually interested in helping the Tweenbots find their way home. Tweenbots move at a constant speed and can only go in a straight line. If one was to get stuck, or was going in the wrong direction, it would be up to strangers to free it or turn it in the right direction. Surprisingly, no Tweenbot was lost or damaged, and each one arrived at its target in good condition. In fact, most people treated the robot in a gentle manner, and some even treated it as though it were a small living being.

Even if you were in a rush to go somewhere, would you stop and help a Tweenbot successfully reach its destination?

39. What is this reading about?

- A. A warm-hearted stranger
- B. A place to buy robots
- C. A new kind of toys
- D. An interesting idea for the future
- E. An experiment

40. What is a Tweenbot?

- A. A ten-inch smiling robot
- B. A person from New York City
- C. A pedestrian
- D. A very large machine

- B. other Tweenbots
- C. kind pedestrians on the street
- D. other robots in New York City
- E. kids

42. Which of the following statements is NOT correct?

- A. Tweenbots could be knocked down by vehicle.
- B. Most people treated Tweenbots in a gentle manner.
- C. Tweenbots could not navigate the city on their own.
- D. Tweenbots move at a constant speed and can only go in a straight line.
- E. Most Tweenbots arrived at their destination damaged or broken.

43. Tweenbots were _____.

- A. bought by many people
- B. ignored by most people
- C. helpful for pedestrians
- D. useful for research
- E. lent by others

44. The verb “navigate” in paragraph 2 is closest in meaning to

- A. to light
- B. to direct
- C. to circle

Task 2. Read the summary of the passage and fill in the blanks with the following words or phrases. There are two extra words or phrases.

/3x3=9 points/

- A. rely on B. inability C. lend a hand D. direction E. successfully

The Tweenbots experiment is the idea of Kacie Kinzer. Tweenbots are small machines that rely on the kindness of strangers to 45. _____ and help them reach their final destination. Surprisingly, some pedestrians took the time to stop and aid a Tweenbot. Each robot's 46. _____ to turn means that it needs the help of people to navigate the sidewalks of New York. With a person's help, a Tweenbot can continue in the right direction to arrive 47. _____ at its destination. This experiment shows that people are quite helpful and don't mind being distracted from their normal routines to help a small robot in need.
